

September 8, 2014

This week, Revoli will be installing construction signage and erosion control barriers, and will start to fuse the bypass pipe working in front of the Westview Cemetery. Equipment such as trench boxes and steel plates will also be delivered to the site.

Once the bypass pipe is fused, it will be laid out along the shoulder of the roadway, but will be buried under the driveways along Bedford Street. The first driveway to cross is the entrance to the Cemetery.
